

[DIGITAL CAMERA CAPABLE OF GENERATING PRINT DATA]

Abstract of Disclosure

A digital camera for generating and sending device-dependent print data to a printer is disclosed. The digital camera has a housing with an opening at a front end for receiving incident light, a sensor installed at a rear end of the housing for detecting the incident light so as to generate raw data, a printer manager having a converter for converting the raw data into the device-dependent print data, and an I/O driver for outputting the device-dependent print data to the printer so that the printer is capable of printing the device-dependent print data automatically.
